IMPORTANT

Depending on different factors out of our control (weather, order quantities, etc), it is possible your order is not exact. However, the maximum is done to honor the order you place.

In general:

- The size of "small" plants will be between 20 and 30 cm, and between 30 and 50 cm for the "large";
- Depending on the species of plants, there will be a variation in the size and density of the branches;
- Small plants come with a bare root and should be planted quickly, while large plants are distributed in 1 gallon pots.

However, depending on the seasonal weather of when the plant cuttings will be growing or other factors, the sizes listed above may not necessarily be achieved.
